

daily and cumulative21April.jpg: the daily number of cases, as reported by the Monterey County Health Department, is plotted, as expected for low numbers, it's very "noisy". Also plotted is the running sum, to which is logistically fitted.

cases fit daily19 April lin.jpg: As previously, the logistic fit's coefficients are used to generate smoothed values of the daily cumulated cases. The difference between adjacent daily values are the daily number of cases, thereby affording a crude projection, in this case, to the end of the epidemic.
